

3 Ways to Master Workplace Hygiene

Organizations are ramping up efforts to elevate hygiene protocols, but are they prepared for what this entails?

Wiping down tabletops and doorknobs won't cut it. A thorough effort is needed to sanitize every touchpoint and surface, and this is often far from simple. The same cloth and general disinfectant cannot clean every surface and texture.

Mastering workplace hygiene isn't easy, but it's possible. Here are three ways to help you get started.

01

Understand your environment

Surveying your surroundings might sound obvious, but details often hide in plain sight. A quick tour of your workplace may reveal spaces, machinery, or fixtures where maintaining hygiene requires more than a rag and disinfecting solution.

Conveyor belts, control panels, and cold storage rooms are just some places that **necessitate a different sanitizing approach**. It also helps to know where the high touch surfaces are and where foot traffic is highest.

02

Gain consensus

Facilities managers and the procurement department may not interface often, but both sides must communicate openly. Having visibility into the challenges faced by the other party is essential to **reduce blind spots in maintaining hygiene**.

No matter the industry, from manufacturing to healthcare, it is a collective responsibility for teams to ensure compliance with rules and regulations. As such, teams must frequently check in with each other.

03

Optimize your cleaning protocol

From a cost, operational, and efficiency perspective, the sheer variety of factors and requirements to maintain clean and safe spaces can be overwhelming. Yet organizations cannot afford to sweep such tasks aside since it concerns their employees' well-being and business performance.

Training and deploying more personnel is one way to meet such operational demands, but it won't be enough. What organizations need is a cleaning system that can be **deployed into a variety of environments and meet the unique requirements of every task.**

Get Started with WetTask™

▶ The good news is, meeting your cleaning needs is now much easier with WetTask™. An alternative to open buckets, reusable rags, and spray bottle and wipe options, WetTask™ provides disposable, dry wipes that **reduce the risk of cross-contamination**¹.

Wipes can be pre-moistened with your chosen solvents²—whether they are specialized or off-the-shelf brands—for multiple industrial applications, **saving**

you time and effort. Moreover, the closed-bucket design reduces solvent waste and evaporation¹, which helps to **protect your employees from chemical exposure**¹.

Having a safe, efficient, and versatile cleaning solution at your disposal frees up your time to focus on managing what really matters – your facility's strategy and operations.

Master
every task
with WetTask™

Gain confidence in your cleaning operations with a reliable and fuss-free cleaning partner.
